

Francesco Gimignano

Senior Software Engineer

✉ f.gimignano92@gmail.com |  [GitHub](#) |  [LinkedIn](#) |  Italy (Remote)

Summary

Senior Software Engineer specialized in building enterprise software and business-critical applications for complex, highly regulated domains.

Currently developing mission-critical telematics services for the Wolters Kluwer Genya platform, enabling secure communication between accounting professionals and the Italian Revenue Agency.

Experienced in building reliable enterprise software, taking ownership of features from implementation through delivery, and contributing to scalable software architectures across backend, frontend and database layers.

Leverage AI-assisted development tools to accelerate implementation, documentation and testing while maintaining full ownership of architecture and code quality.

Passionate about software architecture, developer experience and building products that solve real-world problems.

I thrive in environments where engineering quality, ownership and continuous learning are valued.

Experience

Nexus Advanced Technologies

Italy

Senior Software Engineer

2020 - Present

Developing enterprise software for the Wolters Kluwer Genya platform, focusing on telematics services that enable secure and compliant communication with the Italian Revenue Agency.

Highlights

- Designed and delivered business-critical product features across backend, frontend and database layers using C#, .NET Framework, TypeScript and SQL Server.
- Redesigned the tax filing submission workflow by introducing asynchronous and background processing, enabling batch operations and significantly improving the experience for accounting professionals.
- Collaborate closely with product owners and domain experts to translate complex regulatory requirements into reliable software solutions.
- Worked across legacy and modern components of the Genya platform, balancing feature delivery with long-term maintainability.

Core technologies: C#, .NET Framework, TypeScript, SQL Server, Azure DevOps, Git

Ecom Imaging

Italy

Backend Software Engineer

2017 - 2020

Worked on fotoregali.com, one of Italy's leading personalized gifts ecommerce platforms, developing customer-facing features and internal business tools.

Highlights

- Led the architectural migration of the ecommerce platform from a monolithic application to a cloud-native microservices ecosystem.
- Designed and implemented backend services using C# and .NET Core.
- Defined the technology stack, architectural patterns and migration strategy adopted during the migration.
- Improved platform scalability and reliability during seasonal traffic peaks through CDN and load balancing strategies.
- Developed internal tools to support business operations and improve development workflows.
- Worked with Go, Node.js and GraphQL where project requirements demanded specialized solutions.

Core technologies: C#, .NET Core, AWS, Microservices, Node.js

<> Projects

Breathstealer

2025

Designed and developed a 3D survival game built from scratch during the 48-hour Global Game Jam 2025 in Milan, collaborating in a multidisciplinary team to deliver a fully playable prototype within the deadline.

Core technologies: C#, Unity

Morwen's Curse

2014

Long-term personal project exploring game engine architecture, procedural generation and gameplay systems.

Designed and implemented a complete 2D roguelike engine from scratch featuring procedural dungeon generation, multiple character classes, skills, enemies and combat systems.

Presented at several gaming events in Southern Italy.

Core technologies: C++, SDL, SFML

🎓 Education

University of Bari Aldo Moro

Bachelor's Degree in Computer Science

Bari • 2011 - 2016

Thesis

Jarvis: a voice assistant for home automation

📜 Certifications

AZ-204: Azure Developer Associate

2025

Microsoft Certified

AZ-900: Azure Fundamentals

2022
